Experience

Nov 2022 – now **Software Engineer**, *Jane Street*, London

Worked across multiple teams to support business needs:

- Research: embedded between researchers and traders to productionize the firm's leading ML models for live trading. Streamlined GPU-backed training and inference workflows, optimized research-to-production iteration, and ensured models met production standards for performance, reliability, and observability.
- Order Management System: focused on latency- and risk-sensitive trading systems. Led and supported improvements to flow onboarding, worked closely with trading desks to deliver new OMS features, and played a key role in incident management, monitoring, and live trading support.

Internships

Feb – Aug 2022 **Software Engineering Intern**, *Jane Street*, London

End-of-studies internship.

Sep – Jan 2021 **Software Engineering Intern**, *Software Heritage (Inria)*, Paris

Built a user-space POSIX filesystem to mount and explore the Software Heritage archive as if it was locally available. Publication of a scientific paper in an international peer-reviewed conference.

Jul – Sep 2020 **Software Engineering Intern**, *Jane Street*, London

Summer internship program.

Community

Mar – Aug 2019 **Google Summer of Code**, *Software Heritage (Inria)*, Paris

Compression of the Software Heritage graph data model (12 billion nodes, 165 billion edges) using state of the art compression techniques. Development of a REST API to query the compressed graph, and Docker environment to automate the graph compression pipeline.

2017 – 2022 **Organizer in nonprofit organizations**, Paris

- Prologin: the French national programming contest, redaction of algorithmic problems and exercises for qualification and semi-final rounds, creation of the custom-made game environment for the finals. President of the organization in 2020.
- Girls Can Code!: one-week programming summer school for middle and high school girls. Our goal is to close the gender gap in computer science, by allowing girls to discover the field in a fun and safe environment.

Education

2017 – 2022 **MSc in Computer Science**, *EPITA*, Paris

- Teaching assistant: taught programming skills (C, UNIX, C++, Java, Caml, C#) through courses, talks, and projects; responsible for the 2020 C++ workshop and 2021 C/UNIX workshop.
- Research student (LRDE): implemented concurrent model checking algorithms in C++ for the Spot library using bitstate hashing, a memory-efficient technique to perform high-coverage verifications.

2017 **Scientific Baccalauréat**, Paris

With highest honors (specialization track: mathematics).

Skills

Technical

Programming	C, C++, Python, OCaml, SQL, Java, Rust, Bash, LaTeX	Tools	git, make, jupyter, docker
Systems	GNU/Linux, macOS, Windows, multi-core / GPU systems	Libraries	NumPy, pandas, SciPy, PyTorch

Languages

French	Native speaker	English	Fluent (TOEIC: 980)
